# Management of IF

# History of Visceral Tx

# Visceral (intestinal) Transplantation (Tx)

## Types

### Isolated small bowel (ISB) Tx

Intestine

### Liver-intestine (LI) Tx

Intestine  
Liver

### Multivisceral (MV) Tx

#### Full MV Tx

Intestine  
Liver  
Stomach  
Duodenum  
Pancreas

#### Modified MV Tx

Intestine  
Stomach  
Duodenum  
Pancreas

# Visceral Tx

## Protocols of immunosuppression

	Induction agent (s)	Maintenance agent (s)
Protocol 1	<ul style="list-style-type: none"><li>• <b>Daclizumab.</b></li></ul>	<ul style="list-style-type: none"><li>• <b>Tacrolimus.</b></li><li>• <b>Steroids.</b></li></ul>
Protocol 2	<ul style="list-style-type: none"><li>• <b>rATG (rabbit antithymocyte globulin).</b></li><li>• <b>Rituximab.</b></li></ul>	<ul style="list-style-type: none"><li>• <b>Tacrolimus.</b></li></ul>
Protocol 3	<ul style="list-style-type: none"><li>• <b>Alemtuzumab.</b></li></ul>	<ul style="list-style-type: none"><li>• <b>Tacrolimus.</b></li></ul>

# PATIENTS AND METHODS

## Setting of the study

GI Transplant Division, Miami Transplant Institute/Jackson Memorial Hospital, University of Miami Miller School of Medicine, Miami, Florida, USA

## Subjects

## Criteria of the recipients

### Inclusion criteria

#### Failure of TPN

- Liver failure.
- Thrombosis of central veins.
- Central line-related systemic sepsis.
- Dehydration.

#### Conditions associated with early death

- Desmoid tumor.
- Ultra-SBS.
- Congenital mucosal disorders.
- IF with high morbidity.

### Exclusion criteria

- Significant cardiopulmonary insufficiency
- Incurable malignancy
- Intraabdominal or systemic infections
- Severe immune deficiency syndromes

# PATIENTS AND METHODS

## TECHNICAL DESIGN

### Subjects

### Criteria for the donors

#### Inclusion criteria

- Cadaveric (Brain dead, **heart beating**).
- **Younger than 50 years old.**
- Identical and compatible ABO-blood grouping.
- **BMI is less than 28 kg/m<sup>2</sup>.**
- **ICU stay is  $\leq 5$  days.**
- CIT is no longer than 9 hours.
- Good liver function, if MV allograft is being procured.
- **Serum sodium level is not higher than 155 mEq/L.**
- CMV and EBV positive or negative donors.

#### Exclusion Criteria

- Extended criteria donors.

# PATIENTS AND METHODS

## TECHNICAL DESIGN

### Tools of the study

49 Patients

13 Patients

Group (I)

ISB transplant recipients

- SBS.
- Congenital motility disorders.
- Enterocyte absorptive capacity deficiency.
- Gardner's syndrome.

36 Patients

Group (II)

Full MV transplant recipients

PN associated liver failure

+

- SBS.
- Complex abdominal pathology.

### Immunosuppression protocol

#### Induction immunosuppression

- **rATG: 2 mg/kg X5.**
- **Steroids (Solu-Medrol) in a tapering mode.**
- **Rituximab.**
- **Basiliximab.**

#### Maintenance immunosuppression

- **Tacrolimus.**
- **Everolimus.**

# PATIENTS AND METHODS

## OPERATIONAL DESIGN

### Graft monitoring

- Frequent endoscopies.
- Serum level of citrulline.
- Clinical examination and hand-held Doppler US.

# RESULTS

Recipient Baseline Variables	ISB Tx (n=13) Mean ± SE	Full MV Tx (n=36) Mean ± SE	P-value
<b>A. Age (year)</b>	<b>31.9 ± 5.3</b>	<b>26.9 ± 4.1</b>	<b>0.50</b>
1. Adult (≥18 year)	<b>69.2%</b> (n=9/13)	<b>50.0%</b> (n=18/36)	<b>0.23</b>
<b>B. Gender</b>			<b>0.23</b>
1. Female	<b>46.2%</b> (n=6/13)	<b>50.0%</b> (n=18/36)	
2. Male	<b>53.8%</b> (n=7/13)	<b>50.0%</b> (n=18/36)	
<b>C. Race/Ethnicity</b>			<b>0.82</b>
1. White (non-Hispanic)	<b>53.8%</b> (n=7/13)	<b>52.8%</b> (n=19/36)	
2. Black (non-Hispanic)	<b>23.1%</b> (n=3/13)	<b>16.7%</b> (n=16/36)	
3. Hispanic	<b>23.1%</b> (n=3/13)	<b>30.6%</b> (n=11/36)	
<b>D. Pre-transplant BMI</b>	<b>21.2 ± 1.1</b>	<b>21.8 ± 1.0</b>	<b>0.69</b>
<b>E. ABO-Blood Group</b>			<b>0.25</b>
1. A	<b>15.4%</b> (n=2/13)	<b>33.3%</b> (n=12/36)	
2. B	<b>23.1%</b> (n=3/13)	<b>8.3%</b> (n=3/36)	
3. O	<b>61.5%</b> (n=8/13)	<b>58.3%</b> (n=21/36)	
<b>F. Type of Transplant</b>			
1. Primary Transplant	<b>84.6%</b> (n=11/13)	<b>91.7%</b> (n=33/36)	<b>0.47</b>
2. Secondary Transplant	<b>15.4%</b> (n=2/13)	<b>8.3%</b> (n=3/36)	

# RESULTS

Other Baseline Variables	ISB Tx (n=13) Mean ± SE	Full MV Tx (n=36) Mean ± SE	P-value
<b>A. Donor Age (years)</b>	15.4 ± 3.7	18.3 ± 2.8	0.58
1. Adult (≥18 years)	23.1% (n=3/13)	52.8% (n=19/36)	0.06
<b>B. Donor BMI (Kg/m<sup>2</sup>)</b>	20.6 ± 0.9	20.9 ± 0.7	0.43
<b>C. Ischemia times</b>			
1. Cold ischemia time (CIT) (hours)	6.7 ± 0.32	7.8 ± 0.27	0.04
2. Warm ischemia time (WIT) (minutes)	25.2 ± 1.5	29.4 ± 1.4	0.11
<b>D. T/B Cell Cross-match</b>			0.76
1. T-/B-	83.3% (n=10/12)	85.7% (n=30/35)	
2. T-/B+	0% (n=0/12)	2.9% (n=1/35)	
3. T+/B+	16.7% (n=2/12)	11.4% (n=4/35)	
<b>E. Abdominal Wall Closure</b>			0.68
1. Primary Abdominal Wall Closure	*53.8% (n=7/13)	47.2% (n=17/36)	
2. Vacuum Assisted Closure	46.2% (n=6/13)	52.8 (n=19/36)	
<b>F. Stoma</b>			0.005
1. Ileostomy	53.8 (n=7/13)	13.9% (n=5/36)	
2. Colostomy	38.5% (n=5/13)	36.1% (n=13/36)	
3. No Stoma	7.7% (n=1/13)	50.0% (n=18/36)	

# RESULTS

## Indications for ISB Tx

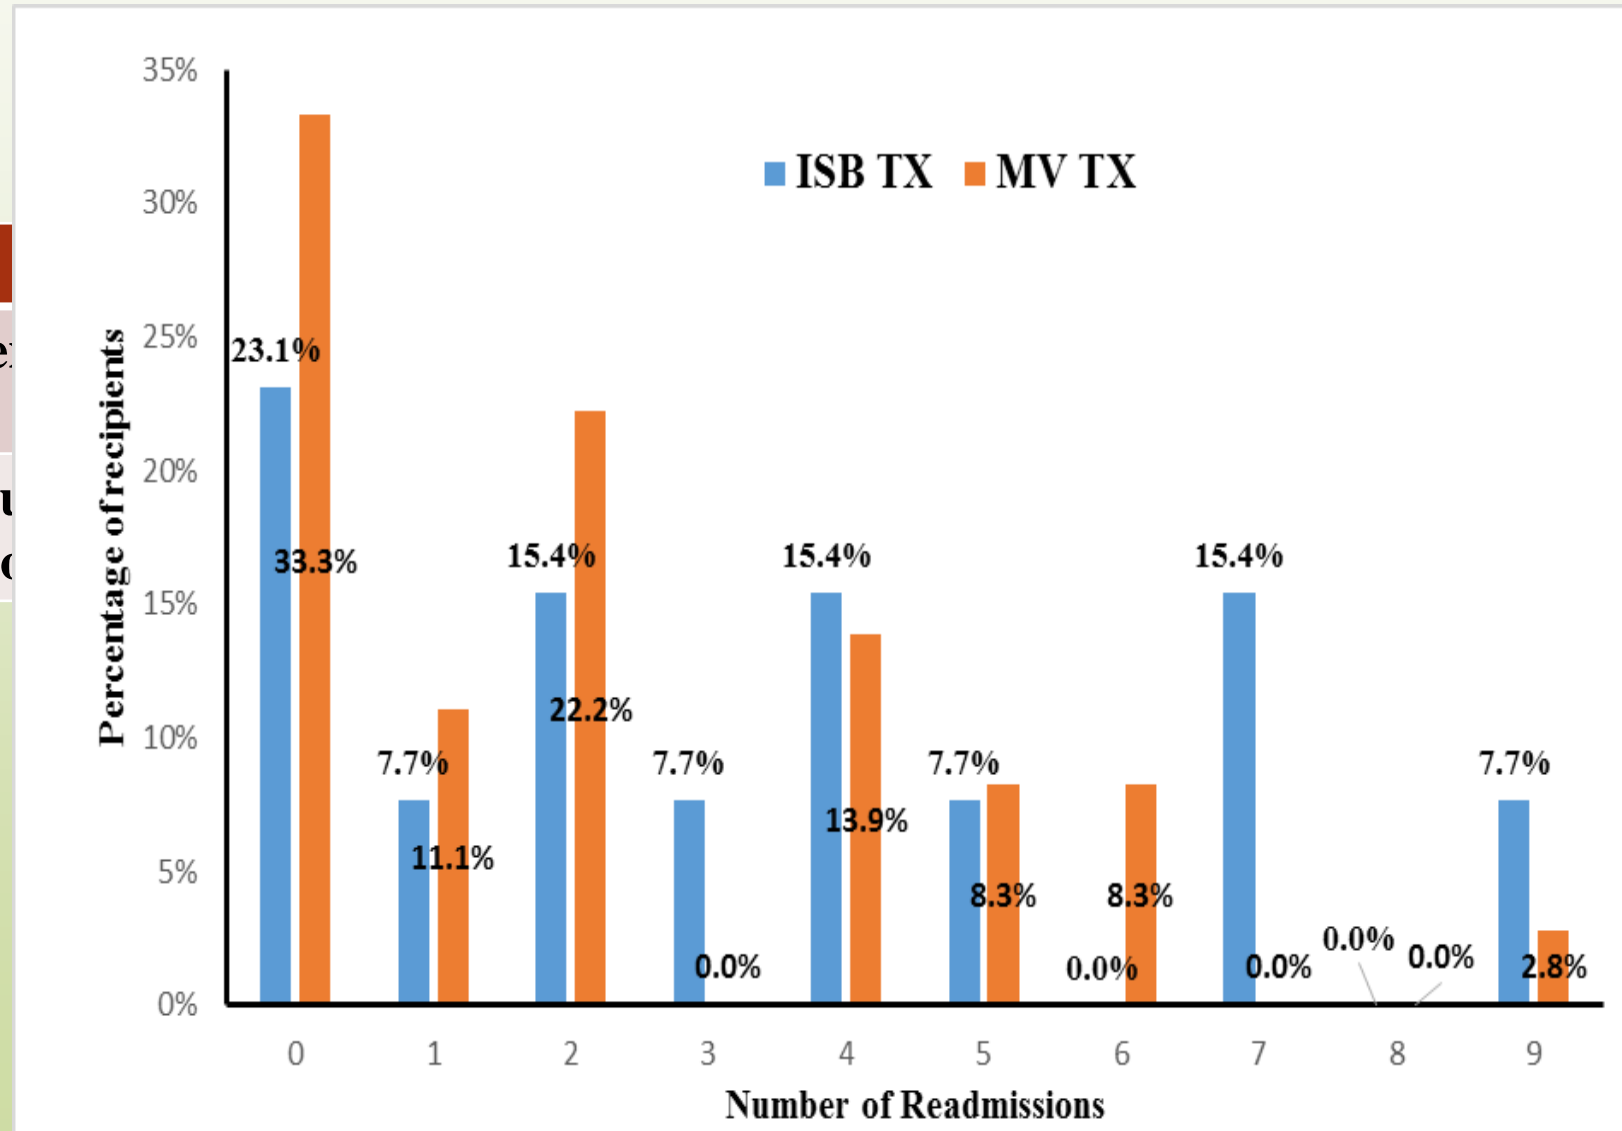

## Indications for full MV Tx

# RESULTS

## Length of hospital stay and readmissions

Median length of stay

Median number of readmissions

value

0.5

0.2

# RESULTS

## Rejection

Kaplan-Meier curve: any biopsy-proven acute rejection free survival by the type of transplant (ISB Tx vs. full MV Tx)

# RESULTS

## Rejection

- Median time to develop a biopsy proven acute rejection (BPAR)
  - ❖ 2.4 (0.6-15.7) months ISB Tx
  - ❖ 0.7 (0.1-8.4) months Full MV Tx

### Sites of first rejection

Site of first rejection	ISB Tx (n=9)	Full MV Tx (n=10)
Small bowel	n=9	n=7
Colon	n=4	n=6
Colostomy		n=2
Stomach		n=2

### Grades of rejection

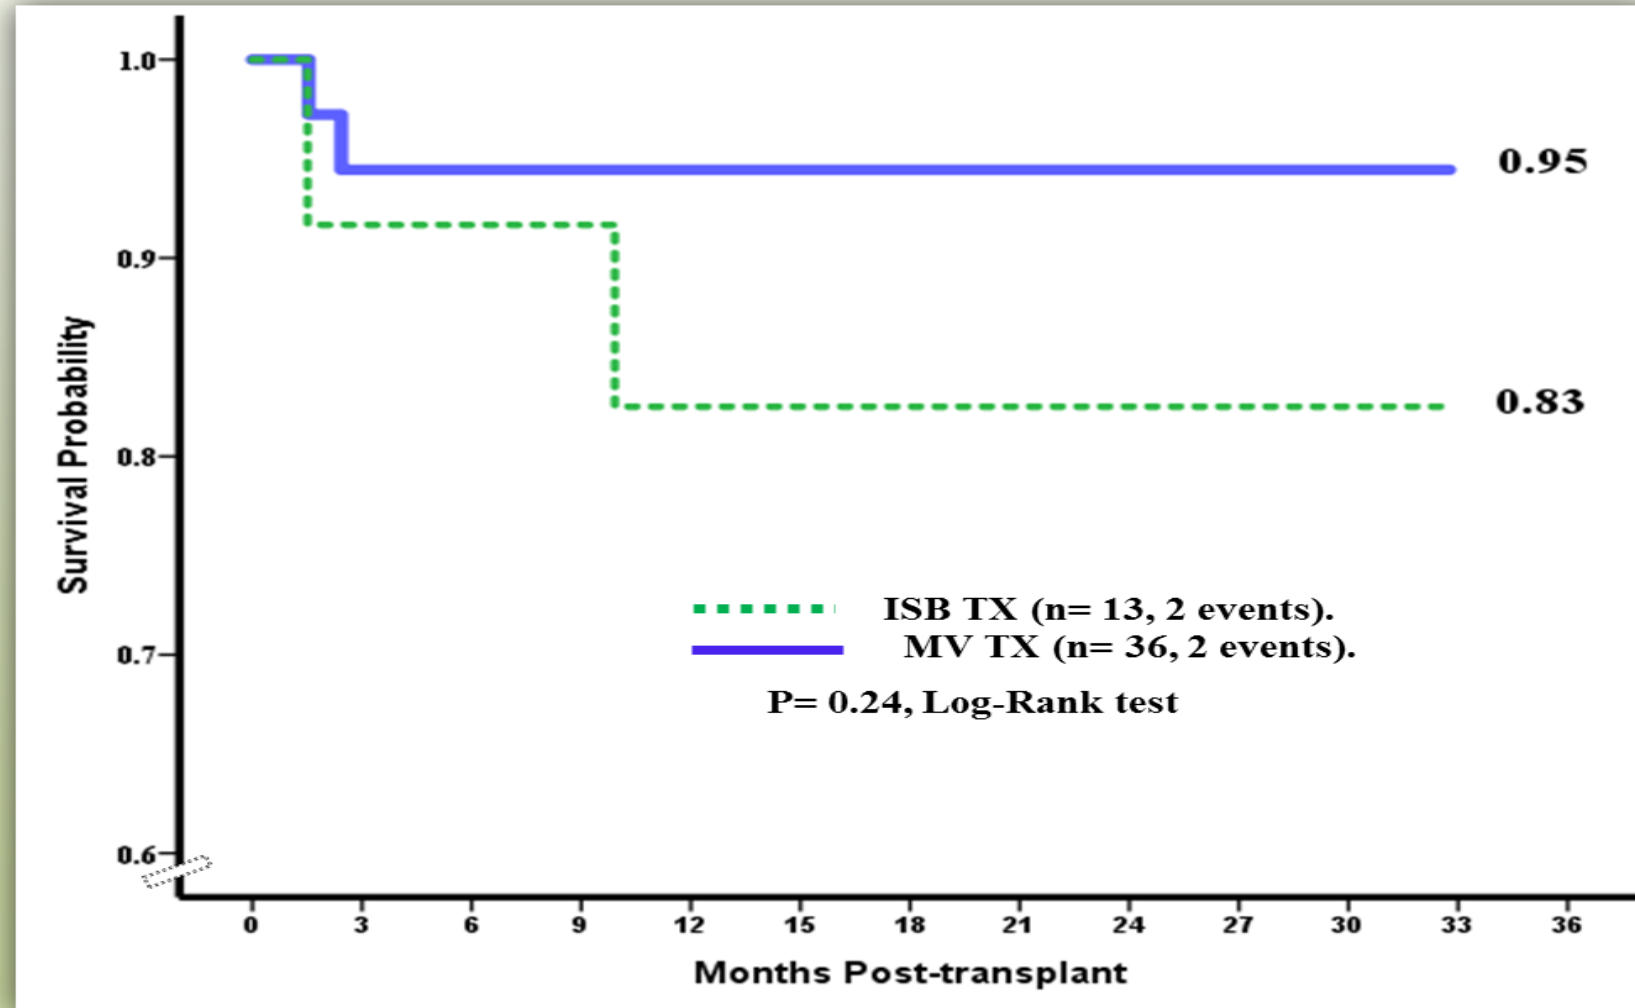

Grade of BPAR	ISB Tx (n=9)	Full MV Tx (n=10)
Grade I	n=7	n=4
Grade II		n=4
Grade III	n=2	n=2

# RESULTS

## Rejection

**Kaplan-Meier curve: severe rejection free survival by the type of transplant (ISB Tx vs. full MV Tx)**

# RESULTS

## Rejection

- **Median time to develop an episode of severe rejection**

❖ **5.7 (1.5-9.9) months    ISB Tx**

❖ **2 (1.5-2.4) months    Full MV Tx**

- **Sites of severe rejection**

**ISB Tx    Both the small bowel and the colon in the 2 cases.**

**Full MV Tx    The small bowel in one case and the colon in the other case.**

# RESULTS

## Rejection

Stepwise Cox regression results for the hazard rate of developing BPAR during the first 36 post-transplant months (n=49, 19 events)

Baseline Variable	Univariable P-value	Multivariable Model	
		P-value	Coeff ± SE
Transplant Type (ISB Tx)	0.01	0.01	1.085 ± 0.463
Systemic Drainage	0.004		
Citrulline Level at 1 <sup>st</sup> month	0.05		

Cox regression model for the hazard rate of developing BPAR during the first 36 months post-transplant (49 cases, 19 events) that includes the 2 variables transplant type, and citrulline level at the 1<sup>st</sup> month (n=43, 17 events)

Baseline Variable	Multivariable Model	
	P-value	Coeff ± SE
Transplant Type (ISB transplant)	0.09	0.960 ± 0.578
Citrulline Level at 1 <sup>st</sup> month	0.46	0.022 ± 0.030

# RESULTS

## Graft failure

- **Causes of intestinal graft failure among ISB transplant recipients**
  - ❖ **Rejection (n=1).**
  - ❖ **Volvulus (n=1).**
- **Causes of intestinal graft failure among the full MV recipients**
  - ❖ **Rejection (n=2).**
  - ❖ **Enterocutaneous fistulas (n=1).**

# RESULTS

## Patient survival

Kaplan Meier curve: patient survival during the first 36 post-transplant months by the type of transplant (ISB Tx vs. full MV Tx)

# RESULTS

## Patient survival

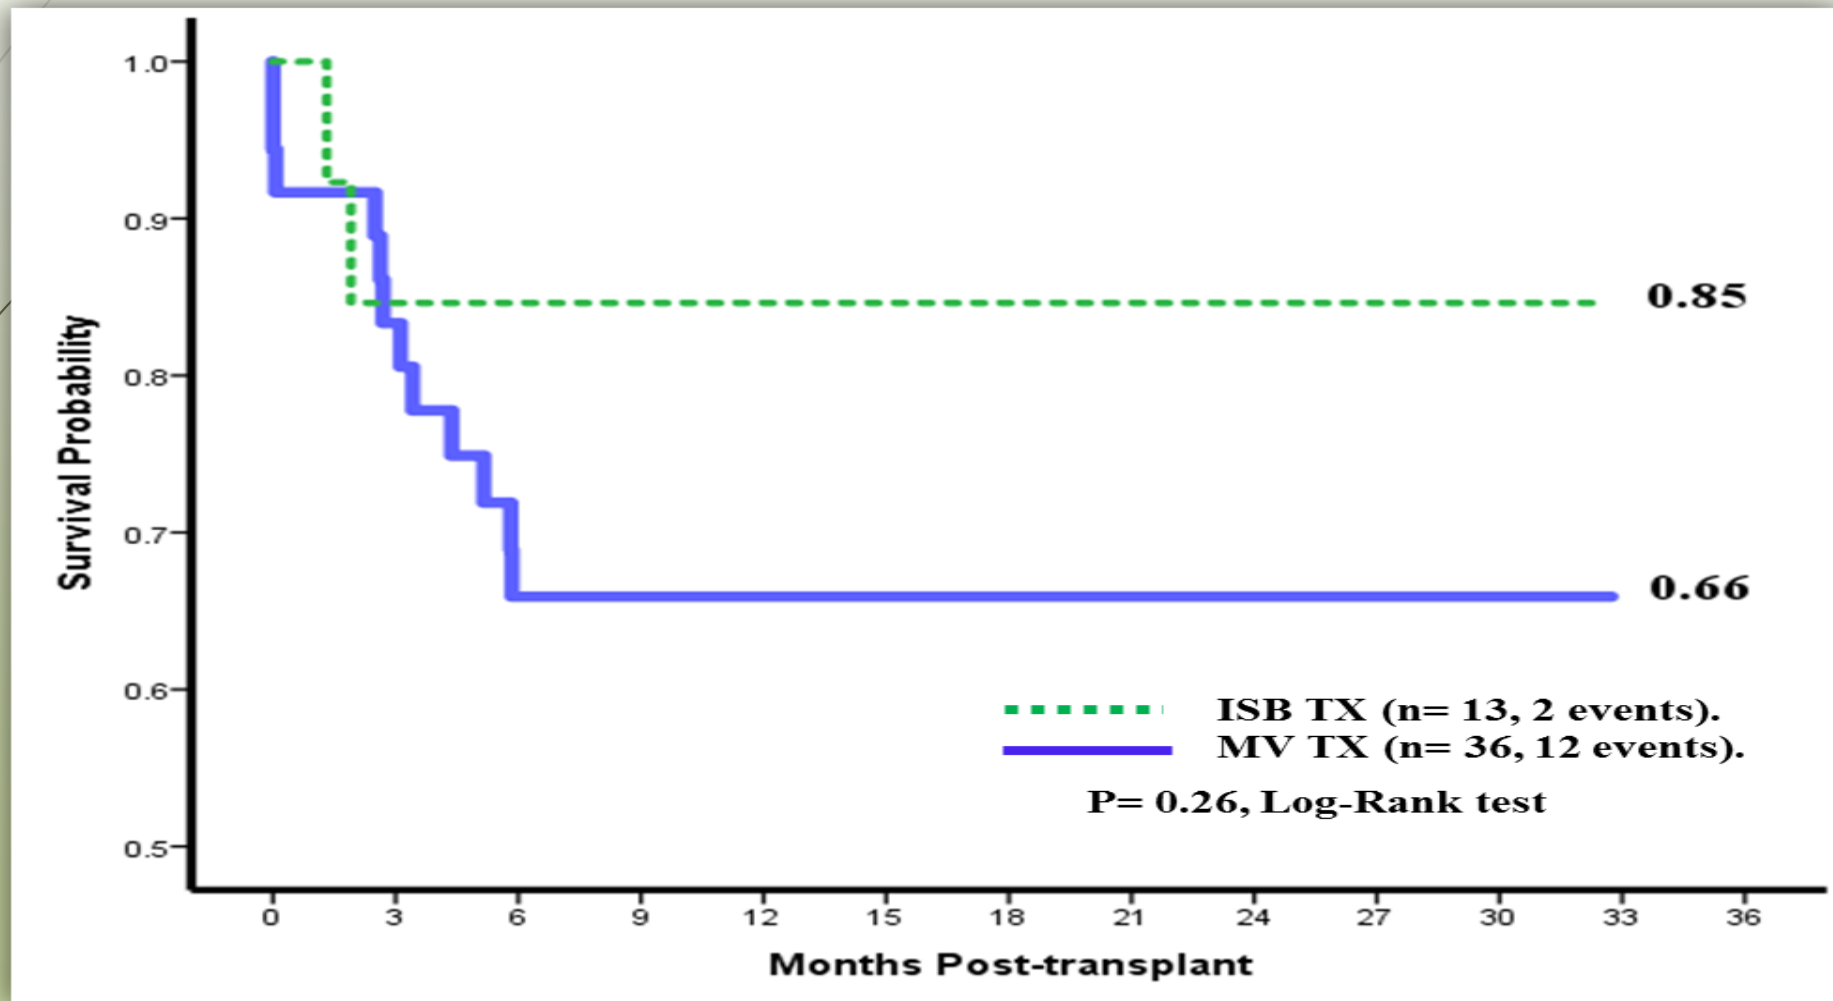

### Full MV transplant recipients

- Median time to patient death within the first 3 post-transplant months **1.3 (0-2.7) months**
- Median time to patient death during the first 36 months **2.7 (0-7.4) months**
- Causes of patient death
  - ❑ GVHD (n=4).
  - ❑ Sepsis (n=2).
  - ❑ Intra-operative coagulopathy (n=1).
  - ❑ Intra-operative cardiac thrombosis (n=1).
  - ❑ Superior vena cava syndrome (n=1).
  - ❑ Rejection (n=1).

# RESULTS

## Graft survival

Kaplan Meier curve: freedom from graft failure or patient death from any cause (death-uncensored graft survival) during the first 36 post-transplant months by the type of transplant (ISB Tx vs. full MV Tx)

# CONCLUSION

- **The results of our study support the worldwide agreement about the advantage of the visceral Tx either ISB Tx or full MV Tx in the management of patients with chronic IF.**
- **Early surgical intervention provides an efficient solution, compatible survival rate and satisfactory quality of life in the management of chronic IF in patients who cannot tolerate the life-long PN.**

Thank you
